

GRANTS TO EDUCATORS

Lymphoma Foundation of America gives grants to researchers, scientists, health professionals, and health advocates to support their lectures at health conferences that are open to the public.

Cancer patients and their families want to learn from recognized experts about the environmental causes of cancer and how to limit exposure to cancer-causing chemicals. We thank the doctors, scientists, public health officials, and patient advocates for their willingness to participate in public forums.

Lymphoma Foundation of America professional education grants
